Data are presented as adjusted odds ratios with 95% confidence interval. Subjects with any missing values were excluded from the analysis. Education is % neighborhood with < HS education. Poverty is % neighborhood living below poverty level. Race/ethnicity is derived from surname analysis and neighborhood-level census data. Mixed race/ethnicity reflects neighborhood with residents of undefined race/ethnicity by surname analysis and census-level data. 75g OGTT is any 75g OGTT, whereas FPG and HbA1c represent FPG or HbA1c only. OR= odds ratio
